

# Daniel Hargreaves, FCSI

*“For your magnanimous support of chapters in and out of your region to develop and maintain manageable websites, successfully bridging old and new to ensure CSI’s future; for your calm and reasoned voice in the debate over governance reform at all levels; for your passionate and exuberant buttressing of a crumbling chapter and the building of a new virtual chapter: CSINext, you are advanced to Fellowship in the Institute on the 27th day of September 2013.”*  
Nashville, Tennessee

DANIEL HARGREAVES, “just a city boy born and raised in south Detroit took the midnight train to anywhere...”  
Actually, Daniel was transplanted at age five to Tucson until he graduated from high school. In 1982, he moved to Phoenix for college, then began his career as an architect. Daniel spent the next ten years in Phoenix, and now resides in Dallas. Daniel is a registered architect and a registered accessibility specialist. He is also a computer programmer and artist.

Daniel took his knowledge of computers and AutoCAD to the architectural and construction community. Providing custom educational training sessions in AutoCAD, computers, and drafting standards, including implementation of the National CAD Standards. Daniel presented over a hundred training sessions customized per client and their learning needs. These training sessions were for individuals and entire offices; he would also present to small groups in a classroom setting. The educational presentations continued while serving CSI on the exciting topic of “Newsletters, Electronic Communication and Websites”.

Daniel joined CSI in March of 2000. Within one month after joining CSI, Daniel became active in the Dallas Chapter. After his first month of membership Daniel became the electronics chair for the Dallas Chapter, and completely reworked the website, providing current content, newsletter archives, simplified navigation, and a modern professional look. Over the years, the website would evolve to be a model for other CSI chapters. Daniel assisted with and helped design web sites for Fort Worth and Los Angeles chapters,

and for the South Central Region. Because of Daniel’s desire to serve the Dallas Chapter, he ultimately became president, in 2004-05. Even during his service as president, Daniel continued to maintain the chapter’s web site and assist other chapters with web site design and maintenance.

While serving as South Central Region Director, Daniel was a significant contributor in the transition of the governance for Institute, South Central Region, and the local chapters. With the South Central Region no longer under the direct leadership of the Institute Directors, Daniel was able to establish a true region board. Daniel served as the first region president with its governance change. The service Daniel provided to the South Central Region helped it transition from a loose collection of chapter presidents to a structured board modeled after the Institute board. This new region board focused on serving the members and doing the business of the South Central Region. Daniel was also one of the key players in creating the Institute’s first virtual chapter, CSINext. The CSINext Chapter fully embraces the CSI of the future, to convey the mission of CSI through the Internet, and to enable CSI members to communicate using the most technologically advanced media available. As a member of awards, membership, governance, publications, electronic communication committees, and various special projects, Daniel has contributed his technical expertise as a software programmer and as an architect to the future of CSI and the construction industry.

## **CSI Membership**

CSINext (virtual); 2009 to present  
Dallas Chapter; 2000 to 2013

## **Institute Offices, Committees**
